Project Name	Measuring The Pulse Of Prosperity: An Index Of Economic Freedom Analysis
Maximum Marks	2 Marks

Customer Problem Statement Template:

Customer:

A data analyst / policymaker / economics student

I'm trying to:

Understand and compare the economic freedom levels of different countries and regions using 2022 data

But:

The data is complex, spread across multiple indicators, and difficult to interpret in raw form

Because:

There is no single visual platform that clearly summarizes country-wise, region-wise, and indicator-based economic freedom insights

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A data analyst	Analyze and compare economic freedom scores of all countries in 2022	The dataset contains many indicators and countries	Raw data does not provide clear insights without visualization	Overwhelmed and uncertain
PS-2	A policymaker / student	Understand region-wise economic freedom trends	There is no summarized regional comparison	Country-level data is not aggregated visually	Confused while identifying regional strengths and weaknesses

Problem statement :

There is no single interactive platform that clearly visualizes and compares the economic freedom scores of all countries in 2022, making it difficult to analyze global economic performance effectively.

Analyzing region-wise economic freedom trends is challenging because raw datasets do not provide aggregated or comparative visual insights across different regions.

Stakeholders face difficulty in identifying top-ranking and bottom-ranking countries in economic freedom due to the absence of structured visual dashboards.

Understanding the relationship between economic freedom and key economic indicators such as GDP growth, inflation, unemployment, and financial freedom is complex without proper data visualization tools.

Policy makers and researchers lack an efficient method to interpret multi-dimensional economic indicators simultaneously, which limits data-driven decision-making.
