

Project Design Phase-I

Solution Architecture

Date	19 Decr 2026
Team ID	LTVIP2026TMIDS35041
Project Name	Measuring The Pulse Of Prosperity: An Index Of Economic Freedom Analysis
Maximum Marks	4 Marks

Solution Architecture:

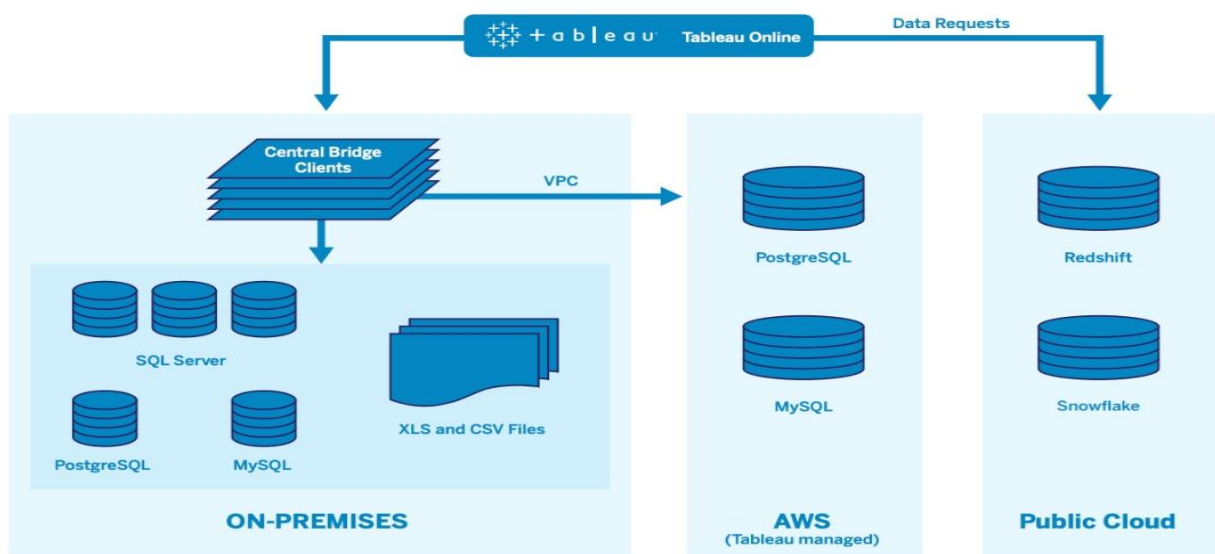

Figure 1: Architecture and Economic freedom analysis

The solution architecture defines how data flows from raw datasets to meaningful visual insights. In this project, the architecture bridges the gap between economic datasets and interactive visual analytics using Tableau.

The architecture is designed to:

- Collect and organize global economic freedom data
- Process and clean the dataset
- Perform calculations such as SUM and AVERAGE
- Visualize insights through dashboards and stories
- Enable decision-making using interactive charts and maps

Key Components of the Architecture:

- Data Source Layer
- Economic Freedom Index dataset (2022)

Data includes country name, region, overall economic freedom score, GDP growth, inflation, unemployment, financial freedom, etc.

Data Pre-Processing Layer

Data cleaning (handling missing values)

Formatting numeric and categorical fields

Creating calculated fields (SUM, AVG, rankings)

Analytics & Processing Layer

Aggregations such as:

Country-wise scores

Region-wise average economic freedom

Sorting and ranking (Top 40, Bottom countries)

Correlation analysis (GDP, inflation, unemployment)

Visualization Layer (Tableau)

Bar charts (country-wise and region-wise)

Maps (global economic freedom visualization)

Dashboards (combined visual insights)

Stories (step-by-step narrative analysis)

Presentation & User Layer

Interactive dashboards

Story navigation for insights

Exporting reports and publishing to Tableau Public
