

Project Design Phase-II

Technology Stack (Architecture & Stack)

Date	31 January 2026
Team ID	LTVIP2026TMIDS35041
Project Name	Measuring The Pulse Of Prosperity: An Index Of Economic Freedom Analysis
Maximum Marks	4 Marks

Technical Architecture:

The technical architecture defines how data is collected, processed, analyzed, and visualized in the Economic Freedom Index Analysis system. The system uses Tableau for visualization, structured datasets for analysis, and statistical calculations to derive insights such as SUM, AVERAGE, region-wise comparisons, dashboards, and stories.

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Interface through which user views dashboards and stories.	Tableau Desktop/Tableau public.
2.	Application Logic-1	Data loading and field mapping logic.	Tableau Data Engine.
3.	Application Logic-2	Calculation logic (SUM, AVG, Rank, Filters).	Tableau Calculated fields.
4.	Application Logic-3	Dashboard and story creation logic.	Tableau Worksheet & Stories.

5.	Database	Stories Economic Freedom index data	CSV/Excel.
6.	Cloud Database	Online data access and sharing	Tableau Public Server
7.	File Storage	Storage of dataset and workbook files	Local System/Cloud
8.	Infrastructure (Server / Cloud)	Hosting dashboards and stories	Local system/Tableau public

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Uses open datasets and free visualization tools	Tableau public
2.	Security Implementations	Data access control and read-only dashboards	Tableau permissions
3.	Scalable Architecture	New years or countries can be added easily	Tableau data refresh
4.	Availability	Dashboards available anytime via Tableau public	Clouding hosting
5.	Performance	Fast rendering of charts and dashboards	Tableau optimized engine
